

SGR-2050/1.2

The SGR bending machine is equipped with segments in three beams: upper, lower and bending beam. Sheet metal can be bent on all sides to produce intricate box shapes or curved up and down sections. Multi-purpose, strong, heavy and very solid segment bending machine – not a typical bending machine – much stronger and more durable. The segment folder is characterized by full segmentation over the entire working length of 2 m. The upper and lower segments can be easily and quickly dismantled, and the bending beam is additionally divided into segments. The bending angle is from 0 to 160 degrees. Locking with a pedal, your hands are free and you can easily position the sheet – open and close with your foot. The bending beam is connected to 2 gas springs, which makes it extremely easy to control the bending beam. Comes with 2 practical tool boxes for segments or tools.

Specifications

Maximum working width: 2050 mm

Bending angle: max. 160 degrees

Maximum sheet thickness (steel): 1.2 mm

Weight: 600 kg

Segment width: 30, 40, 50, 60, 70 and 100 mm

Three beams equipped with segment jaws (full segmentation)

Bending angle limiter

Protractor
